TRADE LIST OF
Hardy American Plants, Shrubs and Trees

U.S. DEPARTMENT OF AGRICULTURE,
Washington, D. C.

New Althea Crested Beauty

THIS elegant new Althea, originated in this nursery, has the same pure white flower with a rich velvet crimson centre as Hibiscus Crimson Eye, which I also introduced and which has become immensely popular. The flowers of Crested Beauty are neither single or double, but the pistil is capped by a crest of small petals which, while it gives a special elegance, does not conceal the beautiful radiating points of rich crimson which are projected into the pure white of the petals.

To sum up, this new Althea has the following points of special elegance :

It is the strongest and most vigorous grower.

It is the largest of all Altheas.

It will produce twice as many flowers as any other variety and continues longer in bloom, and last, but by no means least, the faded flowers do not disfigure the plants as in other sorts.

WM. F. BASSETT

HAMMONTON

NEW JERSEY, U. S. A.

AZALEA CANESCENS

Pink Sweet Scented Azalea.

See pages 2 and 11 for description and price.

DAHLIAS

When I saw my first Dahlia, about seventy years ago, I commenced growing them, and have been at it ever since.

My collection has been systematically culled till only the best cut flower varieties are retained. These I can supply to growers at reasonable prices.

I know how to grow Dahlias for the flower market and will gladly give advice to any of my customers.

Terms and Remarks.

OUR TERMS are net cash, and are for the quantities named, except that 5, 50, and 500 will be furnished at the ten, hundred, and thousand rates, respectively. Persons not known by us to be responsible and reliable, will be expected to send cash with order, or good references.

SHIPPING FACILITIES. Our nurseries are within 30 miles of Philadelphia (two railroads), 100 miles of New York, and freight rates very low.

MAILING PLANTS. Small orders will be filled by mail when so requested, if the size of plant will permit; but postage will be added to bills so forwarded.

COLLECTED PLANTS. This is our original specialty, and we collect plants in New Jersey, Pennsylvania, Delaware and Maryland, and we also have arrangements with special collectors in the New England and other States. This collecting is all done by skilled men, and the plants so collected are not to be compared with "cheap collected plants" PULLED UP by irresponsible parties at so much per thousand. We aim to get the very best, especially in those species that are difficult to transplant, and we send out only such as we could succeed with ourselves; but as we cannot control weather conditions or other circumstances where we send them, we cannot, of course, assume any responsibility further than to ship them in good order.

TRANSPLANTED STOCK. To meet the wants of an increasing list of customers, we have for several years been transplanting the best varieties of our native shrubs and hardy plants into our nursery grounds, and growing them under culture for one or more years.

PACKING, which is done in a most thorough manner, is charged at cost. We use the best of sphagnum moss.

To Our European Friends.

We have a good list of European customers, and our system of packing is such that our shipments have arrived in perfect condition. We wish, however, to say to this class of customers that Fall orders are much more desirable, as the dormant condition of stock shipped at that season admits of closer packing, and consequently safer transit.

Certificate of Inspection.

A copy of the Certificate of Inspection will accompany each shipment.
We will fumigate stock WHEN REQUESTED.

Novelties and Specialties.

New Althea Crested Beauty.—As a hedge plant.

The rich deep green foliage, the short stout growth, the extreme floriferousness, extending over a very long season, and the fact that the closer it is sheared in spring the more vigorous it grows and the larger and greater number of flowers it will produce make this the best of all deciduous hedge plants. The section of a nursery row represented on the first cover page of this catalogue gives some idea of how it will appear in a hedge, but this row had received very little care.

I have now (at the time of this writing, September 1st) hundreds of feet of rows that make a very much better showing. Landscape gardeners should stick a pin here.

Anchusa Italica, Dropmore Variety.

This is a greatly improved variety of the old *Anchusa Italica* which has been the special admiration of all who have seen it in bloom, and pronounced the finest blue flowered Herbaceous plant in cultivation. It will not come true from seed, and is propagated by root cutting, and every grower of Herbaceous plants should secure at least a few this fall for propagation in the greenhouse.

Plumbago Larpentæ.

Several rows of this old favorite blue flower, planted last year, have shown its special adaptation for a border plant or edging for a walk. If planted thickly it makes a perfectly regular line about a foot high and similar width that is in bloom throughout the season, and makes less trouble than almost any other edging, as it requires no shearing.

Chelidonium Majus.

Under the names Garden Celandine and Celandine Poppy, seventy-five years ago, this plant could have been found in the chip yard or by the stone fence of almost every New England homestead, and aside from old associations it is a very desirable plant. Almost before the grass begins to grow in spring it throws up its mass of handsome foliage, which is soon followed by pretty, deep yellow flowers, and remains in bloom for a long time, and if the flower stems are removed when done blooming it will again give a mass of refreshing green.

Funkia Lancifolia.

This plant succeeds even better in a partial shade, and its long spikes of nodding lily-like flowers are very showy. I am offering this year some very strong 4-year clumps.

Azalea Canescens.

I consider this the best of our native Azaleas. It is the earliest to bloom, and its pink flowers are of a brighter color than any other sort, and in fragrance it far surpasses them all, having the same odor as the common grass pinks. I have a good stock of this fine shrub in both transplanted and collected stock, and I think this is the first time it has ever been offered.

Ilex Verticillata (Winter Berry).

It may not be generally understood that this is dioecious and that a large portion, often most of those indiscriminately collected, are staminate and never bear fruit. I have propagated a quantity from plants which are pistillate and will bear fruit and offer them in this list.

Iris Siberica Orientalis.

This is one of the most beautiful *Iris* in cultivation. It is larger than the type and the foliage broader, and the color is a very rich violet blue. Every one who grows *Iris* should have it.

Collection of Choice Standard Phloxes.

Prices (for Fall only). Strong one-year-old field grown plants.

\$1.00 per 10. \$5.00 per 100. \$40.00 per 1000.

- Bridesmaid.* Tall. White, with large crimson-carmine centre.
Beranger. Dwarf. Ground color white, delicately suffused with rosy pink.
Bacchante. Tall. Tyrian rose, with crimson-carmine eye.
Champs Elysee. Medium. A very bright rosy magenta.
Caran d'Ache. Dwarf. Geranium red, with old rose shadings and white eye.
De Miribel. Tall. White, suffused with bright rosy scarlet.
Eclaireur. Tall. Brilliant rosy magenta, with lighter halo.
Eugene Danzervillier. Tall. Lilac, shading white toward the edges, large white centre.
H. O. Wigers. Tall. Pure white, with crimson eye
Jeanne d'Arc. Tall. Late pure white.
La Vague. Medium. Pure white, with aniline red eye
Luineaux. Dwarf. Soft rosy pink, with salmon eye.
Pantheon. Tall. Bright carmine rose.
Pecheur d'Island. Tall. Crimson red, suffused with cochineal and carmine-red eye.
R. P. Struthers. Tall. Rosy-carmine, with claret-red eye.
Sunshine. Dwarf. Large flower, aniline red, with crimson eye and light halo.
Thebaide. Dwarf. Carmine lake, with brighter shadings and aniline red eye.
Von Goethe. Tall. Tyrian rose, suffused with carmine lake and carmine-red eye.
Obergartner Wittig. Medium. Bright magenta, with crimson-carmine eye, large flower and truss.

New and Rare Phloxes.

Prices (for Fall only).

\$1.00 per 10. \$7.00 per 100. \$60.00 per 1000.

- Allion.* Medium. Very vigorous, with very large panicles of pure white flowers, with a faint aniline red eye.
B. Comte. Tall. Glowing reddish French purple.
Coquelicot. Dwarf. Pure scarlet, with crimson eye.
Edmond Rostand. Medium. Reddish violet, shading brighter toward the centre, with large white star-shaped centre.
Mrs. Jenkins. Tall. Early flowering, pure white.
Selma. Tall. Large flower, pale rose mauve, with distinct claret-red eye.
Vesuvius. Medium. Bright pure red, with French purple eye, rich and gay.

General List of Hardy Perennials

We have a large and varied stock of Hardy Perennials, including the very best standard varieties and many of the newer sorts. Parties intending to plant largely of this class of stock should send their list for special estimate. A liberal discount on orders amounting to twenty-five dollars or more.

Filling a fifteen carload order for *Kalmia latifolia*. This work is all done under personal supervision

NEW YORK ZOOLOGICAL PARK, Aug. 18th, 1906.

MR. W. M. F. BASSETT: Dear Sir: The *Kalmias*, ten carloads in all, that we received from you, have done exceedingly well, as might be expected from stock as carefully dug as yours was. We expect a fine show next season, and I hope to be able to send you some photographs of them.

Yours very truly,

HERMANN W. MURKEL, Chief Forester and Constructor.
